

NEW XKP - ESCAPE THE ROUTINE

Aggressive, minimal and reviewed lines. Askoll quality sheds its skin, offering escape and freedom in a typical Millennials style

In short:

- Trendy design
- New display
- New headlights
- Sports fenders
- IoT technology
- New App

XKP, three letters that are synonymous with escapism. There is no need to explain to the Generation Y that these letters are read as “escape” and that their meaning is freedom. Askoll EVA has thought of them creating the ideal adventure companion for the Millennials: clean and aggressive lines, lots of technology and all the reliability of Made in Italy products. The XKP is the scooter that allows you to **combine environmental sustainability with an uncompromising style**.

Few frills: the freedom to be aggressive

Askoll EVA presents two new electric scooters designed for the youngest, the result of the Vicenza-based company with almost a decade of experience. **The XKP is available in two variants:** L1 (which can also be driven with an AM licence) and L3. The two models have the same base as the highly successful eS series, which Askoll has perfected and renewed over the years.

However, the look is radically different starting from the front, characterized by the **new headlight**. In addition to being brighter, combined with the new mudguard, it completely changes the visual impact compared to the previous models and immediately defines a gritty and sporty character. Askoll underlined the same aggressive look at the rear with a wholly redesigned light unit that fits under a **shorter tail**. The result is an electric scooter with a dynamic and muscular design which, thanks to the attention to detail, stands out in the panorama of electric two-wheelers.

The 5.5-inch multicolour display is also entirely new, guaranteeing excellent visibility and following the latest design trends. All the information is visible in all light conditions (speed, battery charge, temperature, time and kilometres travelled). **The XKP** is also equipped with the most advanced **IoT technologies**, which, combined with the **new app**, allow you to access the scooter remotely and customize many functions. For example, it is possible **to know the position of the XKP at any time** and, in the event of theft, to lock the vehicle remotely.

Form and substance

Underneath the freshness of the new look lies an incredible technological concreteness in both versions, powered by the 2,7 Kw Askoll motor.

The **L1 version**, with a **maximum torque of 158 Nm**, reaches **45 km/h** and has a **maximum range of 87 km** (According to EC 168/2013). The more powerful **L3**, has a **maximum torque of 130 Nm**, reaches **66 km/h** and has a **maximum range of 93 km**. Both are powered by **the 2.7 kW Askoll motor**. They are fitted with **two removable 1.4 kWh lithium-ion batteries**, which can be recharged with a normal household current in about 6 hours.

The dynamic qualities of the **XKP** are the result of the combination of two factors: lightness and the choice of high wheels. With a **weight of only 71 kg**, the Askoll scooter is effortless to handle and can put even beginner riders at ease. Thanks also to the saddle height from the ground: only 76 cm. **The 16" wheels** offer excellent comfort and safety even on uneven surfaces. **The XKP** mount **larger tires** (90/80 on the front and 110/70 on the rear), which further contribute to absorbing the roughness of the road surface and guaranteeing more excellent grip. **The front brake is a 220 mm hydraulic disk, the rear brake is 190 mm hydraulic disk.**

Availability and prices

The new **Askoll XKP** will be available starting this spring in anthracite and night gray colors.
